

V10 Financial Information ON-line (FION)

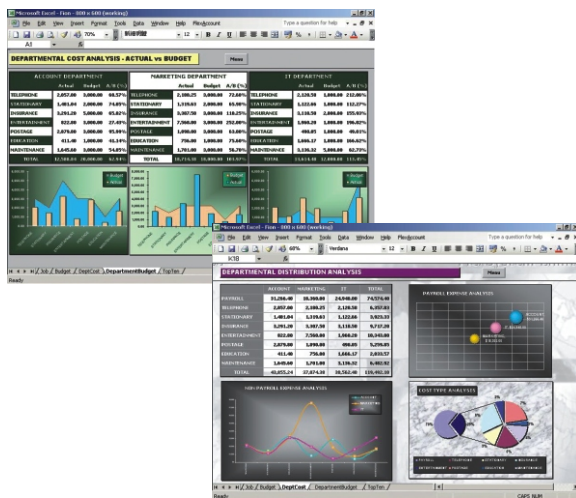

FlexSystem V10 Financial Information ON-line (FION), instant access to your financial information ... with Ease !!!

FION represents the best practice in financial data retrieval, featuring by an easy to use interface and a powerful analysis engine. With FION, you are no longer needed to wait for IT support, but enabled to access key financial figures and construct personalized financial report in popular spreadsheet program.

Best Practice in User Interface

Integrated Environment

With FlexSystem Spreadsheet Add-In Technology, you can easily access your key financial figures through Excel spreadsheet. Instead of data import and export, FION is totally integrated with Excel, you can enjoy the full native functionalities of MS Excel and retrieve key financial figures providing most direct, effective and efficient user experience.

Best Practice in Remote Access

FION Server

Users on the move can utilize the FION Server to have global access to their enterprise information. Within an Internet-ready infrastructure, users will be able to log-on their FION Server to retrieve and update their FlexSystem FMS data in seconds. Additionally, since the FION Server is dedicated to process and retrieve the requested data, rather than passing all the records back to the client for processing, the speed and performance are significantly enhanced.

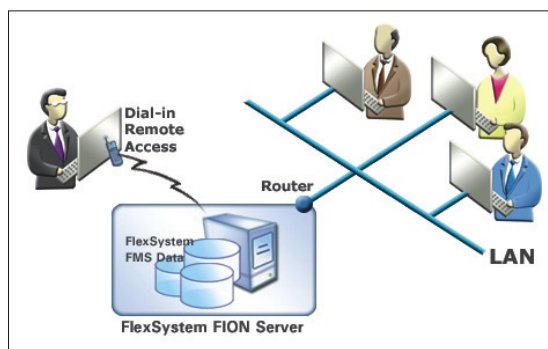

Best Practice in Data Retrieval

Real-World Business Mapping Interface

With FION, users can access their financial information via spreadsheet add-in technology such as Excel to extract account balance, cost center figures and even transaction details, across all ledgers and periods. Most importantly, the users are hidden from the complex database structure. Instead, the users are given a business mapping interface which utilizes user familiar accounting terms like Account Code, Period, Voucher, Current Year Actual, Current Year Budget etc. to retrieve meaningful financial figures. Thus, this query model is designed from the prospective of accounting and financial professional.

Easy to Use

FION is designed to accommodate the needs and skill sets of novice users and power users. The key financial figure retrieval engine design allows users to break complex reports into meaningful Query Blocks. Hence, from a simple individual transaction document filtering to complex account grouping and cost center computation, non-technical users can assemble, recombine pre-defined object components to construct very sophisticated financial information without compromising ease of use.

V10 Financial Information ON-line (FION)

Best Practice in Analysis

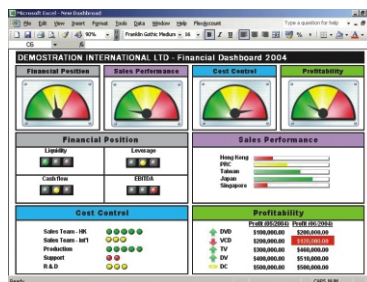

Full Drill Down Capabilities

Not only provides the ease in data retrieval, FION also helps achieving a detailed view into the transactions and enables you to understand the truth behind the numbers. Just by a few mouse clicks, you can do extensive drill down starting from summary level to the transaction details at the bottom, that every single point in the source document will also be shown immediately.

Best Practice in Reporting

Financial Personalized Performance Dashboard

Instead of putting all the numbers into simple table, FION also enriches your presentation quality by its value-added feature, Financial Dashboard. It is a customizable indicator to enable the management to keep track of key financial information, thus formulating the strategy plan of action accordingly. Financial Dashboard delivers an interactive analysis environment to present the critical value of business performance in a visual and graphical format in which user can pinpoint the trend and drill deeper for more details. The dashboard layout is customizable that logo, images and clipart can be added, providing user a familiar feel and look, as well as flattening their learning curve.

Configured Report Templates

In order to increase efficiency in financial reporting and budgeting, a set of high quality report templates is available. By using an intuitive interface to map your Chart of Account into the report templates, you can quickly construct sophisticated reports in a minute, and can customize and personalize the reports for your own needs.

Integration with FlexSystem Report Writer

Additional to the full featured Graphical User Interface, FION has retained its keyboard input integration with the FlexSystem Report Writer. All of the familiar keywords in the Report Writer are available within FION. That is, ledger figures comparison, monthly status, multi-level cost center analysis, debtor and creditor balance, selection with match patterns and ..., can be retrieved with ana(XXX), ccy(XXX), eqv(XXX), deb(XXX), cre(XXX), eac(XXX), leg(XXX), ean(XXX), mac(XXX), etc..

Key Features

- ◆ Ready to use which minimizes set-up and administrative work
- ◆ Integrated with popular office applications such as Excel and the FION query engine
- ◆ Real-world Business Mapping Interface hides user from the underlying complex database structure
- ◆ Point and click retrieval mechanism select fields and hide columns through the built-in Data Field Selection Screen
- ◆ Component based syntax creates Query Blocks to extract Executive Information with ease
- ◆ Personalized Financial Dashboard - user can create interactive report contents which make information meaningful and easy to understand
- ◆ User can easily drill through from summary information to detailed transactions
- ◆ Tailored report templates are available for the user to meet their organization needs
- ◆ Visualized query result with graphs and charts
- ◆ Security control to prohibit unauthorized access
- ◆ Provide summary balance as well as detailed transaction information
- ◆ Remote access to the financial information via FION Server
