

# V10 Inventory Control

An effective stock level has a significant impact on the company's operating cost, cash flow and profitability. FlexSystem Inventory Control helps balancing between over-stock (which is a drain on company resources) and outstanding stock (which delays delivery and order completion), thus helping to maintain a lower inventory carrying costs. Easy monitoring on a full range of warehouse transactions including sales, purchases transfers and adjustments. All transactions and costs are recorded in detail, allowing stock histories and inventory valuations at any time, for any date.

- ◆ Effective data entry through easy to read UI, high speed keyboard operation, data lookup assistant and complete data validation
- ◆ Support popular SQL database or high speed ISAM
